PROJECT DESCRIPTION

This project will reduce fuel loading on 103 acres of central coast chaparral along roads in the Carmel Valley and Cachagua areas of Monterey County. In addition, portions of the project area are used as access for fire suppression and emergency egress for the residents of the greater Carmel Valley and Carmel Highlands areas. The project includes paved and native surface roads. The project will reduce woody vegetation less than 12" DBH within 10 feet of a road. Vegetation will be reduced by approximately 60% within up to 100 feet of a road. Dead, diseased, and dying trees that may impact a road or structure will be removed. All remaining trees near a road will be pruned up to 16 feet or 50% of the live crown (whichever is less) within 100 feet of a road. This will open emergency ingress/egress in the event of an emergency as well as create defensible space for potential fires. The vegetation will be reduced by a combination of hand crews and mechanical means. The hand crews will use chainsaws; the resulting material shall be chipped and used as mulch on the property. The mechanical treatment area will be masticated, with the mulch left on site for soil protection and to control weed invasion.
